

Environmental policy

Masonite Beams shall, in collaboration with suppliers and customers, engage in activities that work for a sustainable development.

Masonite Beams shall continuously ensure that the policy meets binding requirements, and work with continuous improvements of the environmental management system to achieve better environmental performance.

The following is applied to the environmental work:

- Work towards reducing the total long-term environmental impact per produced unit.
- To use renewable raw materials as much as possible.
- That the constituent components in manufacturing of the produced products as well as the finished products should be as safe as possible for people and the environment.
- Minimize the emissions to air and water and minimize the generated waste.
